

Mobile Training Case

The SmartLabs mobile laptop cart range, offers secure storage and ultra safe-recharging for laptops, depending on the unit size and capacity of your choice. All laptops are recharged simultaneously and housed in secure metal cabinets in order to minimize theft. Through a selection process, one is able to choose a cart based on the functionality requirements of one's classroom. One can either select a basic storage and recharging trolley right through to a complete mobile science class. The Mobile Laptop carts support most laptop models.

Application

The Mobile Training case is used in education and training establishments where numerous laptops and a digital projector are required to be both mobile and secure. The Mobile Training storage case has been designed to be ultra strong and light weight for long distance transportation. The Mobile Training case has a high density foam inlay for the protection of the contents. The high density foam inlay can be customized to house ten laptops and a medium sized digital projector or up to twelve laptops.

Rigidised aluminum

High density foam
